

STANDALONE SECURITY SITE KIT

Hikvision's Standalone Security Site Kit includes a solar panel, a battery, a 4G camera and a bracket. It can realise **one-stop monitoring in remote environments without power or a network**, such as agriculture and animal husbandry, forest fire prevention, and temporary monitoring of construction sites.

KEY FEATURES

1 Monitoring in remote environments without power and network

Hikvision's Standalone Security Site Kit is powered by solar energy, which transmits video to a monitoring centre through 4G. It is a good choice in environments without electricity or a network.

2 Long endurance design

In order to deliver the maximum endurance, the kit detects power levels and automatically switches to power-saving mode when they are low.

It can work continuously for **7 days** in cloudy and rainy weather when fully charged.
